CONFIDENTIAL - SUBJECT TO PROTECTIVE ORDER

	Page 194		Page 196
1	flow and turbulent flow?	1	micron or less; correct?
2	A. Yes.	2	A. Yes.
3	Q. Do you hold yourself out as an expert	3	Q. Anything larger than one micron actually has
4	between laminar flow and turbulent flow with respect	4	inertia; correct?
5	to an operating room?	5	A. As I said, it depends on the the
6	A. As applied to an operating room, probably	6 7	direction-of-flow change. If there's no significant acceleration or direction-of-flow change, then you can
7 8	not. Q. Okay. Do you know whether or not you could	8	actually use larger particles.
9	get true laminar flow in an operating room?	9	Q. Well how large?
10	A. I would suspect that would be highly	10	A. Again, depends on the the direction-of-
11	unlikely.	11	flow change.
12	Q. You don't hold yourself out as an expert in	12	Q. But you agree with me that even in a filter,
13	particle flow in an operating room; correct?	13	that particles larger than one micron do not follow
14	A. Not that I've worked in. I've never	14	the the the airflow stream; correct?
15	measured particle flows in an operating room, so I do	15	A. Because of the the sharp transition of
16	not consider myself to be an expert.	16	air air streamlines around the fibers of the filter
17	Q. Are you able to calculate how turbulent flow	17 18	material.
18 19	affects particle movement in an operating room? A. I I know how to do that in in general.	19	Q. And that's when you you you collect particles by impaction during for larger particles;
20	I would assume it would be applied to airflow in an	20	correct?
21	operating room also.	21	A. That's correct.
22	Q. Can you do that by hand, or do you need to	22	Q. Because larger particles have inertia;
23	use the Navier-Stokes equation?	23	correct?
24	THE REPORTER: "do you need to use"	24	A. Yes.
25	Q. Can you do that by hand, or do you need to	25	Q. If there's a if there's a change in the
	Page 195		Page 197
1		1	
1 2	use some sort of computational modeling?	1 2	direction of the air stream, it's no longer going to
1 2 3			
2 3 4	use some sort of computational modeling? A. For realistic applications that are fairly complex, you would need to use some software. Q. Okay. Such as ANSYS?	2 3 4	direction of the air stream, it's no longer going to follow the particle is no longer going to follow the air stream, it has inertia and will get away from the air stream; correct?
2 3 4 5	use some sort of computational modeling? A. For realistic applications that are fairly complex, you would need to use some software. Q. Okay. Such as ANSYS? A. Yes.	2 3 4 5	direction of the air stream, it's no longer going to follow the particle is no longer going to follow the air stream, it has inertia and will get away from the air stream; correct? A. And it depends on the ratio of the particle
2 3 4 5 6	use some sort of computational modeling? A. For realistic applications that are fairly complex, you would need to use some software. Q. Okay. Such as ANSYS? A. Yes. Q. Okay. And have you ever used ANSYS or any	2 3 4 5 6	direction of the air stream, it's no longer going to follow the particle is no longer going to follow the air stream, it has inertia and will get away from the air stream; correct? A. And it depends on the ratio of the particle inertia and the the acceleration.
2 3 4 5 6 7	use some sort of computational modeling? A. For realistic applications that are fairly complex, you would need to use some software. Q. Okay. Such as ANSYS? A. Yes. Q. Okay. And have you ever used ANSYS or any type of computer program to determine how particles	2 3 4 5 6 7	direction of the air stream, it's no longer going to follow the particle is no longer going to follow the air stream, it has inertia and will get away from the air stream; correct? A. And it depends on the ratio of the particle inertia and the the acceleration. Q. And in fact, when you add turbulence to the
2 3 4 5 6 7 8	use some sort of computational modeling? A. For realistic applications that are fairly complex, you would need to use some software. Q. Okay. Such as ANSYS? A. Yes. Q. Okay. And have you ever used ANSYS or any type of computer program to determine how particles move in a turbulent environment?	2 3 4 5 6 7 8	direction of the air stream, it's no longer going to follow the particle is no longer going to follow the air stream, it has inertia and will get away from the air stream; correct? A. And it depends on the ratio of the particle inertia and the the acceleration. Q. And in fact, when you add turbulence to the equation, that also affects the airflow when the
2 3 4 5 6 7 8 9	use some sort of computational modeling? A. For realistic applications that are fairly complex, you would need to use some software. Q. Okay. Such as ANSYS? A. Yes. Q. Okay. And have you ever used ANSYS or any type of computer program to determine how particles move in a turbulent environment? A. Yes.	2 3 4 5 6 7 8 9	direction of the air stream, it's no longer going to follow the particle is no longer going to follow the air stream, it has inertia and will get away from the air stream; correct? A. And it depends on the ratio of the particle inertia and the the acceleration. Q. And in fact, when you add turbulence to the equation, that also affects the airflow when the intensity of the turbulence increases; correct? Or
2 3 4 5 6 7 8 9	use some sort of computational modeling? A. For realistic applications that are fairly complex, you would need to use some software. Q. Okay. Such as ANSYS? A. Yes. Q. Okay. And have you ever used ANSYS or any type of computer program to determine how particles move in a turbulent environment? A. Yes. Q. When?	2 3 4 5 6 7 8 9 10	direction of the air stream, it's no longer going to follow the particle is no longer going to follow the air stream, it has inertia and will get away from the air stream; correct? A. And it depends on the ratio of the particle inertia and the the acceleration. Q. And in fact, when you add turbulence to the equation, that also affects the airflow when the intensity of the turbulence increases; correct? Or particle movement.
2 3 4 5 6 7 8 9	use some sort of computational modeling? A. For realistic applications that are fairly complex, you would need to use some software. Q. Okay. Such as ANSYS? A. Yes. Q. Okay. And have you ever used ANSYS or any type of computer program to determine how particles move in a turbulent environment? A. Yes.	2 3 4 5 6 7 8 9	direction of the air stream, it's no longer going to follow the particle is no longer going to follow the air stream, it has inertia and will get away from the air stream; correct? A. And it depends on the ratio of the particle inertia and the the acceleration. Q. And in fact, when you add turbulence to the equation, that also affects the airflow when the intensity of the turbulence increases; correct? Or
2 3 4 5 6 7 8 9 10	use some sort of computational modeling? A. For realistic applications that are fairly complex, you would need to use some software. Q. Okay. Such as ANSYS? A. Yes. Q. Okay. And have you ever used ANSYS or any type of computer program to determine how particles move in a turbulent environment? A. Yes. Q. When? A. I gave a short course for the American	2 3 4 5 6 7 8 9 10	direction of the air stream, it's no longer going to follow the particle is no longer going to follow the air stream, it has inertia and will get away from the air stream; correct? A. And it depends on the ratio of the particle inertia and the the acceleration. Q. And in fact, when you add turbulence to the equation, that also affects the airflow when the intensity of the turbulence increases; correct? Or particle movement. A. Yes, it definitely affects particle
2 3 4 5 6 7 8 9 10 11 12 13 14	use some sort of computational modeling? A. For realistic applications that are fairly complex, you would need to use some software. Q. Okay. Such as ANSYS? A. Yes. Q. Okay. And have you ever used ANSYS or any type of computer program to determine how particles move in a turbulent environment? A. Yes. Q. When? A. I gave a short course for the American Association of Aerosol Research probably 20 years ago which included stochastic particle modeling, effect of turbulence, turbulent kinetic energy, and basically	2 3 4 5 6 7 8 9 10 11 12 13 14	direction of the air stream, it's no longer going to follow the particle is no longer going to follow the air stream, it has inertia and will get away from the air stream; correct? A. And it depends on the ratio of the particle inertia and the the acceleration. Q. And in fact, when you add turbulence to the equation, that also affects the airflow when the intensity of the turbulence increases; correct? Or particle movement. A. Yes, it definitely affects particle movement. Q. Okay. You could have a general air stream, but once you add turbulence to that air stream, you
2 3 4 5 6 7 8 9 10 11 12 13 14 15	use some sort of computational modeling? A. For realistic applications that are fairly complex, you would need to use some software. Q. Okay. Such as ANSYS? A. Yes. Q. Okay. And have you ever used ANSYS or any type of computer program to determine how particles move in a turbulent environment? A. Yes. Q. When? A. I gave a short course for the American Association of Aerosol Research probably 20 years ago which included stochastic particle modeling, effect of turbulence, turbulent kinetic energy, and basically using Lagrange in particle tracking.	2 3 4 5 6 7 8 9 10 11 12 13 14 15	direction of the air stream, it's no longer going to follow the particle is no longer going to follow the air stream, it has inertia and will get away from the air stream; correct? A. And it depends on the ratio of the particle inertia and the the acceleration. Q. And in fact, when you add turbulence to the equation, that also affects the airflow when the intensity of the turbulence increases; correct? Or particle movement. A. Yes, it definitely affects particle movement. Q. Okay. You could have a general air stream, but once you add turbulence to that air stream, you really can't use the the mean average with respect
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	use some sort of computational modeling? A. For realistic applications that are fairly complex, you would need to use some software. Q. Okay. Such as ANSYS? A. Yes. Q. Okay. And have you ever used ANSYS or any type of computer program to determine how particles move in a turbulent environment? A. Yes. Q. When? A. I gave a short course for the American Association of Aerosol Research probably 20 years ago which included stochastic particle modeling, effect of turbulence, turbulent kinetic energy, and basically using Lagrange in particle tracking. Q. And you agree with me that you have to use	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16	direction of the air stream, it's no longer going to follow the particle is no longer going to follow the air stream, it has inertia and will get away from the air stream; correct? A. And it depends on the ratio of the particle inertia and the the acceleration. Q. And in fact, when you add turbulence to the equation, that also affects the airflow when the intensity of the turbulence increases; correct? Or particle movement. A. Yes, it definitely affects particle movement. Q. Okay. You could have a general air stream, but once you add turbulence to that air stream, you really can't use the the mean average with respect to particle movement any more because you have
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	use some sort of computational modeling? A. For realistic applications that are fairly complex, you would need to use some software. Q. Okay. Such as ANSYS? A. Yes. Q. Okay. And have you ever used ANSYS or any type of computer program to determine how particles move in a turbulent environment? A. Yes. Q. When? A. I gave a short course for the American Association of Aerosol Research probably 20 years ago which included stochastic particle modeling, effect of turbulence, turbulent kinetic energy, and basically using Lagrange in particle tracking. Q. And you agree with me that you have to use Lagrange in particle tracking to actually track	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17	direction of the air stream, it's no longer going to follow the particle is no longer going to follow the air stream, it has inertia and will get away from the air stream; correct? A. And it depends on the ratio of the particle inertia and the the acceleration. Q. And in fact, when you add turbulence to the equation, that also affects the airflow when the intensity of the turbulence increases; correct? Or particle movement. A. Yes, it definitely affects particle movement. Q. Okay. You could have a general air stream, but once you add turbulence to that air stream, you really can't use the the mean average with respect to particle movement any more because you have turbulence.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	use some sort of computational modeling? A. For realistic applications that are fairly complex, you would need to use some software. Q. Okay. Such as ANSYS? A. Yes. Q. Okay. And have you ever used ANSYS or any type of computer program to determine how particles move in a turbulent environment? A. Yes. Q. When? A. I gave a short course for the American Association of Aerosol Research probably 20 years ago which included stochastic particle modeling, effect of turbulence, turbulent kinetic energy, and basically using Lagrange in particle tracking. Q. And you agree with me that you have to use Lagrange in particle tracking to actually track particles in a turbulent environment; correct?	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	direction of the air stream, it's no longer going to follow the particle is no longer going to follow the air stream, it has inertia and will get away from the air stream; correct? A. And it depends on the ratio of the particle inertia and the the acceleration. Q. And in fact, when you add turbulence to the equation, that also affects the airflow when the intensity of the turbulence increases; correct? Or particle movement. A. Yes, it definitely affects particle movement. Q. Okay. You could have a general air stream, but once you add turbulence to that air stream, you really can't use the the mean average with respect to particle movement any more because you have turbulence. A. That would still be the most probable
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	use some sort of computational modeling? A. For realistic applications that are fairly complex, you would need to use some software. Q. Okay. Such as ANSYS? A. Yes. Q. Okay. And have you ever used ANSYS or any type of computer program to determine how particles move in a turbulent environment? A. Yes. Q. When? A. I gave a short course for the American Association of Aerosol Research probably 20 years ago which included stochastic particle modeling, effect of turbulence, turbulent kinetic energy, and basically using Lagrange in particle tracking. Q. And you agree with me that you have to use Lagrange in particle tracking to actually track particles in a turbulent environment; correct? A. It turns out that if your particles are	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	direction of the air stream, it's no longer going to follow the particle is no longer going to follow the air stream, it has inertia and will get away from the air stream; correct? A. And it depends on the ratio of the particle inertia and the the acceleration. Q. And in fact, when you add turbulence to the equation, that also affects the airflow when the intensity of the turbulence increases; correct? Or particle movement. A. Yes, it definitely affects particle movement. Q. Okay. You could have a general air stream, but once you add turbulence to that air stream, you really can't use the the mean average with respect to particle movement any more because you have turbulence. A. That would still be the most probable particle path. The turbulence dispersion would be
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	use some sort of computational modeling? A. For realistic applications that are fairly complex, you would need to use some software. Q. Okay. Such as ANSYS? A. Yes. Q. Okay. And have you ever used ANSYS or any type of computer program to determine how particles move in a turbulent environment? A. Yes. Q. When? A. I gave a short course for the American Association of Aerosol Research probably 20 years ago which included stochastic particle modeling, effect of turbulence, turbulent kinetic energy, and basically using Lagrange in particle tracking. Q. And you agree with me that you have to use Lagrange in particle tracking to actually track particles in a turbulent environment; correct? A. It turns out that if your particles are small enough and the airflow does not change direction	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20	direction of the air stream, it's no longer going to follow the particle is no longer going to follow the air stream, it has inertia and will get away from the air stream; correct? A. And it depends on the ratio of the particle inertia and the the acceleration. Q. And in fact, when you add turbulence to the equation, that also affects the airflow when the intensity of the turbulence increases; correct? Or particle movement. A. Yes, it definitely affects particle movement. Q. Okay. You could have a general air stream, but once you add turbulence to that air stream, you really can't use the the mean average with respect to particle movement any more because you have turbulence. A. That would still be the most probable particle path. The turbulence dispersion would be about that streamline.
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	use some sort of computational modeling? A. For realistic applications that are fairly complex, you would need to use some software. Q. Okay. Such as ANSYS? A. Yes. Q. Okay. And have you ever used ANSYS or any type of computer program to determine how particles move in a turbulent environment? A. Yes. Q. When? A. I gave a short course for the American Association of Aerosol Research probably 20 years ago which included stochastic particle modeling, effect of turbulence, turbulent kinetic energy, and basically using Lagrange in particle tracking. Q. And you agree with me that you have to use Lagrange in particle tracking to actually track particles in a turbulent environment; correct? A. It turns out that if your particles are	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	direction of the air stream, it's no longer going to follow the particle is no longer going to follow the air stream, it has inertia and will get away from the air stream; correct? A. And it depends on the ratio of the particle inertia and the the acceleration. Q. And in fact, when you add turbulence to the equation, that also affects the airflow when the intensity of the turbulence increases; correct? Or particle movement. A. Yes, it definitely affects particle movement. Q. Okay. You could have a general air stream, but once you add turbulence to that air stream, you really can't use the the mean average with respect to particle movement any more because you have turbulence. A. That would still be the most probable particle path. The turbulence dispersion would be
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	use some sort of computational modeling? A. For realistic applications that are fairly complex, you would need to use some software. Q. Okay. Such as ANSYS? A. Yes. Q. Okay. And have you ever used ANSYS or any type of computer program to determine how particles move in a turbulent environment? A. Yes. Q. When? A. I gave a short course for the American Association of Aerosol Research probably 20 years ago which included stochastic particle modeling, effect of turbulence, turbulent kinetic energy, and basically using Lagrange in particle tracking. Q. And you agree with me that you have to use Lagrange in particle tracking to actually track particles in a turbulent environment; correct? A. It turns out that if your particles are small enough and the airflow does not change direction very quickly, you could actually use a streamline, the	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	direction of the air stream, it's no longer going to follow the particle is no longer going to follow the air stream, it has inertia and will get away from the air stream; correct? A. And it depends on the ratio of the particle inertia and the the acceleration. Q. And in fact, when you add turbulence to the equation, that also affects the airflow when the intensity of the turbulence increases; correct? Or particle movement. A. Yes, it definitely affects particle movement. Q. Okay. You could have a general air stream, but once you add turbulence to that air stream, you really can't use the the mean average with respect to particle movement any more because you have turbulence. A. That would still be the most probable particle path. The turbulence dispersion would be about that streamline. Q. Okay. Do you have any articles to support
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	use some sort of computational modeling? A. For realistic applications that are fairly complex, you would need to use some software. Q. Okay. Such as ANSYS? A. Yes. Q. Okay. And have you ever used ANSYS or any type of computer program to determine how particles move in a turbulent environment? A. Yes. Q. When? A. I gave a short course for the American Association of Aerosol Research probably 20 years ago which included stochastic particle modeling, effect of turbulence, turbulent kinetic energy, and basically using Lagrange in particle tracking. Q. And you agree with me that you have to use Lagrange in particle tracking to actually track particles in a turbulent environment; correct? A. It turns out that if your particles are small enough and the airflow does not change direction very quickly, you could actually use a streamline, the time-average streamlines, and predict the most	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	direction of the air stream, it's no longer going to follow the particle is no longer going to follow the air stream, it has inertia and will get away from the air stream; correct? A. And it depends on the ratio of the particle inertia and the the acceleration. Q. And in fact, when you add turbulence to the equation, that also affects the airflow when the intensity of the turbulence increases; correct? Or particle movement. A. Yes, it definitely affects particle movement. Q. Okay. You could have a general air stream, but once you add turbulence to that air stream, you really can't use the the mean average with respect to particle movement any more because you have turbulence. A. That would still be the most probable particle path. The turbulence dispersion would be about that streamline. Q. Okay. Do you have any articles to support that opinion?

CONFIDENTIAL - SUBJECT TO PROTECTIVE ORDER

1	Page 198		Page 200
	publication record.	1	shot.
2	Q. And there has been a lot of advancement in	2	Q. So the answer to that would be maybe, but
3	computational fluid dynamics software since the 1990s;	3	not you're not a hundred percent sure you could do
4	hasn't there?	4	it.
5	A. Yes.	5	A. I I'm probably 90 percent sure I could do
6	Q. More-powerful computers; correct?	6	it.
7	A. Yes.	7	Q. Could you write out the boussinesq approach
8	Q. The technical limitation is actually the	8	with incorporating that into the Navier-Stokes
9	computer.	9	equation today?
10	A. That's probably correct.	10	A. I could probably do that.
11 12	Q. Might be other limitations, but the most significant limitation in performing these	11 12	Q. Have you reviewed the videos of Dr. Elghabashi regarding his CFD analysis?
13	calculations are the ability of computers to actually	13	A. The videos, no.
14	computate all the data.	14	Q. Did you ever consider doing your
15	A. It's it's the refinement of the grid	15	measurements with a PIV?
16	essentially.	16	A. Which which measurements?
17	Q. When is the last time you constructed a grid	17	Q. The measurements you did for Exhibit B with
18	for a CFD analysis?	18	a
19	A. Personally?	19	Do you know what a PIV is?
20	Q. Yes.	20	A. Yes.
21	A. Probably it's been probably about 20	21	Q. What's a PIV?
22	years ago.	22	A. Particle Image Velocimetry.
23	Q. You've read Elghabashi's expert report;	23	Q. And that's the most accurate way to measure
24	correct?	24	velocity of the air today; correct?
25	A. I have.	25	A. It's a non-intrusive method. It's also a
	Page 199		Page 201
1	Q. Do you agree that Elghabashi is an expert in	1	very expensive piece of equipment and requires a lot
2	particle movement?	2	of data data analysis.
3	A. I would say he probably is, yes.		
		3	Q. Did you consider using that in your
4	Q. Are you aware that	4	analysis?
5	You also looked at his deposition, correct,	4 5	analysis? A. No, because of the
5 6	You also looked at his deposition, correct, Dr. Elghabashi's deposition?	4 5 6	analysis? A. No, because of the I wasn't sure I had avail that type of
5 6 7	You also looked at his deposition, correct, Dr. Elghabashi's deposition? A. I I was given his deposition. I did not	4 5 6 7	analysis? A. No, because of the I wasn't sure I had avail that type of instrumentation available to me and how much effort it
5 6 7 8	You also looked at his deposition, correct, Dr. Elghabashi's deposition? A. I I was given his deposition. I did not have a chance to read through it.	4 5 6 7 8	analysis? A. No, because of the I wasn't sure I had avail that type of instrumentation available to me and how much effort it would require to set it up and and reduce the data.
5 6 7 8 9	You also looked at his deposition, correct, Dr. Elghabashi's deposition? A. I I was given his deposition. I did not have a chance to read through it. Q. Are you aware that he's doing work for the	4 5 6 7 8 9	analysis? A. No, because of the I wasn't sure I had avail that type of instrumentation available to me and how much effort it would require to set it up and and reduce the data. Q. And it's very expensive.
5 6 7 8 9 10	You also looked at his deposition, correct, Dr. Elghabashi's deposition? A. I I was given his deposition. I did not have a chance to read through it. Q. Are you aware that he's doing work for the military with aircraft-carrier design?	4 5 6 7 8 9 10	analysis? A. No, because of the I wasn't sure I had avail that type of instrumentation available to me and how much effort it would require to set it up and and reduce the data. Q. And it's very expensive. A. And it's very expensive, yes.
5 6 7 8 9	You also looked at his deposition, correct, Dr. Elghabashi's deposition? A. I I was given his deposition. I did not have a chance to read through it. Q. Are you aware that he's doing work for the military with aircraft-carrier design? A. I was not aware of that.	4 5 6 7 8 9	analysis? A. No, because of the I wasn't sure I had avail that type of instrumentation available to me and how much effort it would require to set it up and and reduce the data. Q. And it's very expensive. A. And it's very expensive, yes. Q. Could be in in in the millions.
5 6 7 8 9 10 11	You also looked at his deposition, correct, Dr. Elghabashi's deposition? A. I I was given his deposition. I did not have a chance to read through it. Q. Are you aware that he's doing work for the military with aircraft-carrier design?	4 5 6 7 8 9 10 11	analysis? A. No, because of the I wasn't sure I had avail that type of instrumentation available to me and how much effort it would require to set it up and and reduce the data. Q. And it's very expensive. A. And it's very expensive, yes.
5 6 7 8 9 10 11 12	You also looked at his deposition, correct, Dr. Elghabashi's deposition? A. I I was given his deposition. I did not have a chance to read through it. Q. Are you aware that he's doing work for the military with aircraft-carrier design? A. I was not aware of that. Q. Okay. Are you aware that he has access to	4 5 6 7 8 9 10 11 12	analysis? A. No, because of the I wasn't sure I had avail that type of instrumentation available to me and how much effort it would require to set it up and and reduce the data. Q. And it's very expensive. A. And it's very expensive, yes. Q. Could be in in in the millions. A. I don't think it's quite that much, but
5 6 7 8 9 10 11 12 13 14 15	You also looked at his deposition, correct, Dr. Elghabashi's deposition? A. I I was given his deposition. I did not have a chance to read through it. Q. Are you aware that he's doing work for the military with aircraft-carrier design? A. I was not aware of that. Q. Okay. Are you aware that he has access to the military supercomputer that most people don't have access to? A. I was not aware of that.	4 5 6 7 8 9 10 11 12 13 14 15	analysis? A. No, because of the I wasn't sure I had avail that type of instrumentation available to me and how much effort it would require to set it up and and reduce the data. Q. And it's very expensive. A. And it's very expensive, yes. Q. Could be in in in the millions. A. I don't think it's quite that much, but certainly hundreds of thousands. Q. Okay. Did you ever consider using ANSYS to model the Bair Hugger in an operating room?
5 6 7 8 9 10 11 12 13 14 15 16	You also looked at his deposition, correct, Dr. Elghabashi's deposition? A. I I was given his deposition. I did not have a chance to read through it. Q. Are you aware that he's doing work for the military with aircraft-carrier design? A. I was not aware of that. Q. Okay. Are you aware that he has access to the military supercomputer that most people don't have access to? A. I was not aware of that. Q. Are you aware of the military supercomputer	4 5 6 7 8 9 10 11 12 13 14 15 16	analysis? A. No, because of the I wasn't sure I had avail that type of instrumentation available to me and how much effort it would require to set it up and and reduce the data. Q. And it's very expensive. A. And it's very expensive, yes. Q. Could be in in in the millions. A. I don't think it's quite that much, but certainly hundreds of thousands. Q. Okay. Did you ever consider using ANSYS to model the Bair Hugger in an operating room? A. I did not really consider that. I really
5 6 7 8 9 10 11 12 13 14 15 16 17	You also looked at his deposition, correct, Dr. Elghabashi's deposition? A. I I was given his deposition. I did not have a chance to read through it. Q. Are you aware that he's doing work for the military with aircraft-carrier design? A. I was not aware of that. Q. Okay. Are you aware that he has access to the military supercomputer that most people don't have access to? A. I was not aware of that. Q. Are you aware of the military supercomputer that the military uses for aviation?	4 5 6 7 8 9 10 11 12 13 14 15 16 17	analysis? A. No, because of the I wasn't sure I had avail that type of instrumentation available to me and how much effort it would require to set it up and and reduce the data. Q. And it's very expensive. A. And it's very expensive, yes. Q. Could be in in in the millions. A. I don't think it's quite that much, but certainly hundreds of thousands. Q. Okay. Did you ever consider using ANSYS to model the Bair Hugger in an operating room? A. I did not really consider that. I really have not done CFD work myself for for many years.
5 6 7 8 9 10 11 12 13 14 15 16 17 18	You also looked at his deposition, correct, Dr. Elghabashi's deposition? A. I I was given his deposition. I did not have a chance to read through it. Q. Are you aware that he's doing work for the military with aircraft-carrier design? A. I was not aware of that. Q. Okay. Are you aware that he has access to the military supercomputer that most people don't have access to? A. I was not aware of that. Q. Are you aware of the military supercomputer that the military uses for aviation? A. Not specifically, no.	4 5 6 7 8 9 10 11 12 13 14 15 16 17 18	analysis? A. No, because of the I wasn't sure I had avail that type of instrumentation available to me and how much effort it would require to set it up and and reduce the data. Q. And it's very expensive. A. And it's very expensive, yes. Q. Could be in in in the millions. A. I don't think it's quite that much, but certainly hundreds of thousands. Q. Okay. Did you ever consider using ANSYS to model the Bair Hugger in an operating room? A. I did not really consider that. I really have not done CFD work myself for for many years. Q. But you consider yourself an expert in CFD.
5 6 7 8 9 10 11 12 13 14 15 16 17 18 19	You also looked at his deposition, correct, Dr. Elghabashi's deposition? A. I I was given his deposition. I did not have a chance to read through it. Q. course particle modeling adds another way of 1 2 complexity. 3

- Q. Do you think you're capable sitting here today to perform a CFD analysis, without anyone else's help, on an operating room?
- A. It would take me quite a while to go back and review the manual and get up -- up to speed. I could probably do it, but it would take me quite a while.
- 10 Q. So you'll agree with me that with respect to computational fluid dynamics in the present, you're 11 not an expert in it as of right now. 12
- 13 A. In terms of actually personally performing 14 the results, --
 - Q. Yes.

- A. -- no. 16
 - Q. So you'll agree that you're not an expert at this point in time in your career.
- A. In terms of analyzing other people's 19 results, I think I am. In terms of generating my own 20 21 results, no.
- 22 Q. Do you know the difference between a RANS 23 model and an LES model? R-A-N-S and L-E-S.
- A. It's been a long time since I've thought 24 25 about that, but it's Reynolds Averaging Navier-Stokes

used R -- RANS or LES or the type of turbulent modeling.

A. Having not seen his report, I have no idea.

Page 204

Page 205

- Q. Would you agree that when you -- when you model an operating room and you have people in it as well as lights and the flow is not turbulent -- or the flow is turbulent, that you should have some sort of turbulent modeling in your CFD analysis?
 - A. It depends what your ultimate objective is.
 - Q. To follow particles.
- A. As I said before, if the streamlines had not changed direction very rapidly and the particles are small enough, they would simply follow the timeaverage streamline without using a turbulence model.
 - Q. Okay. When you say they're not -- they don't change direction very rapidly, what would that mean? What does that mean to you?
- A. I -- I go back to impactor technology where you're purposely trying to extract particles from the airflow by changing the direction very rapidly, and so it depends on the velocity of the particle and -- and the -- well basically the velocity of the particle heading towards the surface, so impaction technology.
- Q. Are you saying the change of airflow like 90 degrees, or are you saying five degrees, three

Page 203

degrees?

A. It -- it --

Really, it depends on the rate of change of airflow, the -- the acceleration I would -- I should say, perpendicular to the mean flow direction.

Q. And in analyzing --

And in determining whether or not to use a turbulent model in the CFD, how do you determine whether or not you should assume that the particles travel along the air streams or not?

- A. Again, depends on whether your flow is essentially unidirectional or there's a lot of accelerations associated with it, and -- and the directional changes.
- Q. Well you agree with me that when you have obstructions such as the patient, surgeon, table, lights, you're going to have significant changes in the airflow direction when the air hits that; correct?
 - A. Yes.
- Q. Okay. Knowing what an operating room is, do you agree with me that you should have some sort of turbulence modeling in an operating room if you're going to have a -- a valid CFD analysis?

MR. GOSS: Objection.

A. I think that would be the most appropriate,

versus Large Eddy Simulation.

- Q. When you performed CFD analysis, did you 2 3 ever use LES?
- 4 A. I did not personally. It was the Reynolds 5 Averaging.
 - Q. Okay. And -- and the purpose of the boussinesq and the RANS is to reduce the computational time when you use computational fluid dynamics; correct?
- 10 A. That's correct, using a simplified set of 11 equations.
- Q. Okay. When was the first time you saw a 12 Bair Hugger? 13
- 14 A. Probably in the -- the office, maybe in March or April. 15
 - Q. Okay. And which Bair Hugger model was it?
 - A. I believe it was the -- we may have looked at both the 505 and the 750 or 755, or --

There was an earlier version and at least one of the later versions.

- 21 Q. Okay. Going -- going back, and I might have asked you this before, you haven't seen Abraham's 22 23 report; correct?
 - A. I have not, yes.
 - Q. Okay. So you haven't seen whether or not he
